

COLLOQUIUM ON  
**GALOIS GEOMETRY**  
TO THE MEMORY OF  
**FRÉDÉRIC VANHOVE**  
(1984 – 2013)

**Friday, February 28, 2014**

9h00: welcome coffee

9h20: opening

9h30: Valentina Pepe (University of Rome, La Sapienza)  
*Extremal Theorems in Polar Spaces*

10h30: Bill Martin (Worcester Polytechnic Institute)  
*Girth and dual girth parameters in polynomial association schemes*

11h30: Willem Haemers (University of Tilburg)  
*More eigenvalue interlacing*

12h30: lunch

13h30: John Bamberg (University of Western Australia, Perth)  
*The brilliant career of Frédéric Vanhove*

14h00: Ferdinand Ihringer (University of Gießen)  
*On the Maximum Size of M-Cliques of Generators on Hermitian Polar Spaces*

15h00: coffee break

15h30: Chris Godsil (University of Waterloo)  
*Quantum walks and distance-regular graphs*

16h30: Akihiro Munemasa (Tohoku University, Sendai)  
*Twisted symplectic polar graphs and Gordon-Mills-Welch difference sets*

17h20: closing

ORGANISERS:

Jan De Beule, Leo Storme and Hendrik Van Maldeghem

GHENT UNIVERSITY  
DEPARTMENT OF MATHEMATICS  
KRIJGSLAAN 281, BUILDING S25  
EMMY NOETHER LECTURE ROOM  
9000 GHENT  
BELGIUM

Participation, lunch, and coffee are free, please register at [jdebeule@cage.ugent.be](mailto:jdebeule@cage.ugent.be),  
before Februari 20, 2014
